

U.S. stocks were modestly negative last week, with the S&P 500 and Dow finishing fractionally lower and the Nasdaq falling more than 2%. The pullback was not severe, but it did reflect a shift in tone. After a strong year-to-date rally, investors appear less willing to reward broad optimism and more focused on which companies can deliver earnings growth, margin durability, and clearer returns on investment.

Oil prices moved sharply higher as renewed Middle East tensions and shipping disruptions raised concerns about energy supply. U.S. crude approached \$90 per barrel by the end of the week, up meaningfully from early July. Higher oil prices complicate the inflation picture and could keep consumer and business costs under pressure.

Bond yields also moved higher, with the 10-year Treasury yield rising near 4.70% and the 30-year Treasury moving above 5%. This matters for both stock and bond investors. Higher yields can pressure equity valuations, especially growth stocks, while also limiting the near-term price upside for longer-duration bonds. Shorter-term bonds remain relatively attractive for income-oriented investors.

The Fed is back in focus this week. Markets broadly expect the Fed to hold rates steady at the July meeting, but the path beyond that is less settled. If oil prices remain elevated and inflation proves sticky, September could become a more important meeting. For portfolios, the message remains consistent: stay invested, but emphasize diversification, quality earnings, and a realistic range of outcomes rather than one confident forecast.

Real Gross Domestic Product (A191RL1Q225SBEA)

- Gross domestic product (GDP) is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment. Real values are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

Civilian Unemployment Rate

- The unemployment rate represents the number of unemployed as a percentage of the labor force. Labor force data are restricted to people 16 years of age and older, who currently reside in 1 of the 50 states or the District of Columbia, who do not reside in institutions (e.g., penal and mental facilities, homes for the aged), and who are not on active duty in the Armed Forces.

GLOSSARY OF TERMS & CITATIONS (CONTD.)

Median CPI

- Median Consumer Price Index (CPI) is a measure of core inflation calculated the Federal Reserve Bank of Cleveland and the Ohio State University. Median CPI was created as a different way to get a 'Core CPI' measure, or a better measure of underlying inflation trends. To calculate the Median CPI, the Cleveland Fed analyzes the median price change of the goods and services published by the BLS. The median price change is the price change that's right in the middle of the long list of all of the price changes. This series excludes 49.5% of the CPI components with the highest and lowest one -month price changes from each tail of the price-change distribution resulting in a Median CPI Inflation Estimate. According to research from the Cleveland Fed, the Median CPI provides a better signal of the inflation trend than either the all-items CPI or the CPI excluding food and energy. According to newer research done at the Cleveland Fed, the Median CPI is even better at PCE inflation in the near and longer term than the core PCE.
